Summary

Fullstack developer with **3 years of experience in professional frontend development** building scalable, high-performance web applications using React, Next.js, TypeScript, and modern UI frameworks. I've shipped products across fields (including insurance), system integrator, and reporting platforms, improving efficiency, UX, and performance. My most recent work at SIMASJIWA (Top Insurance Company) focuses on revamping internal apps, developing advanced ticketing flows, and modernizing pension fund systems. I'm passionate about clean UI, speed, and production-ready engineering.

Professional Experience

PT. Bumi Amarta Teknologi Mandiri (AMARTEK) / System Integrator Company Frontend Developer

Jakarta, Remote from
Tangerang

Client: **SIMASJIWA - Center Jakarta / Top Insurance Company in Indonesia**

Feb. 2024 - Present

TechStack: Typescript, Next.js, Material UI, Ant Design, Zustand, Redux

- Designed advanced data-entry interfaces and form flows to reduce friction for operational teams handling large customer datasets.
- Developed a complete ticketing module with dynamic, interactive tables to streamline cross-department issue tracking.
- Enhanced performance and improved state flow by optimizing Zustand and Redux patterns for smoother user interactions.
- Implemented schema-driven dynamic forms with validation rules, conditional fields, and API-based dynamic select options.
- Supported teammates in development and debugging, resolving bugs and improving system stability across releases.
- Improved overall app performance by reducing heavy renders, optimizing loading states, and fixing slow pages through targeted tuning.
- Added login redirect logic to route users based on deep links and role-specific paths correctly.
 - **Achievement :**
 - Boosted user efficiency by 30% after modernizing and redesigning the pension system UI/UX.
 - Reduced issue-resolution time by 20% through an interactive ticketing platform with streamlined workflows.
 - Cut data-entry friction by ~25% by delivering optimized form flows, validation logic, and reusable components.
 - Unblocked a teammate during a 2-week sprint, preventing a ~20% delay and keeping the feature delivery on schedule.

PT. Semesta Arus Teknologi - Cilandak, South Jakarta / IT Solution Company Frontend Developer

Indonesia
Jan. 2023 - Jan. 2024

TechStack: SvelteKit, Google Maps API, ApexChart, Jenkins.

- Designed and developed reusable frontend components to reduce duplication, standardize behavior, and improve long-term scalability.
- Developed interactive dashboards using ApexCharts to provide real-time analytics and visual insights.
- Digitized manual reporting workflows using SvelteKit, improving data accuracy and operational speed.
- Implemented secure Role-Based Access Control (RBAC) to manage authentication and role-specific permissions across the system.
- Integrated Google Maps API to dynamically visualize geolocation data and enhance spatial reporting capabilities.
- Deployed and maintained the application on a VPS using PM2 and Docker, and enabled automated delivery through Jenkins CI/CD pipelines.
- **Achievement :**
 - Reduced report completion time by 50% through full digitization of manual reporting flows.
 - Improved data visibility by 40% through integrated dynamic maps and enhanced geolocation filtering.
 - Increased deployment reliability by 35% after implementing automated CI/CD and containerized services.

Project

Optic Shop Order Lens Management ~ Full Stack Developer — Client Project

Stack: React Router v7 (SSR), TypeScript, Hono (Node.js), PostgreSQL, Tailwind CSS, Vitest, Playwright, Docker, GitHub Actions.

- Designed full-stack management system for optical shops — covering order lifecycle, customer/vendor tracking, and lens prescription data (SPH/CYL/axis/PD) with real-time status updates and soft-delete recovery.
- Built analytics dashboard with revenue, profit margin, and order trend charts — filterable by custom date ranges, backed by optimized PostgreSQL queries.
- Shipped production-ready app with JWT authentication, role-based access control, PDF invoice generation, end-to-end test coverage, and automated CI/CD pipeline via GitHub to deploy to self-hosted VPS.

Mili (Personal Finance Tracker) ~ Full Stack Developer — [Mili](#)

Stack: React Router v7, Hono, TypeScript, Drizzle ORM, Better Auth, Tailwind CSS, Recharts, Vitest, Playwright, Docker, GitHub Actions.

- Architected and shipped a production-ready personal finance platform end-to-end — covering multi-account balance tracking, transaction management with automatic balance updates, and per-category monthly budgets with recurring support and real-time spend percentage tracking.
- Designed a mobile-first responsive UI with Recharts and Tailwind CSS, incorporating PWA features like offline support and interactive financial visualizations.
- Implemented a production-ready authentication layer using Better Auth, supporting secure session management and multi-factor authentication with native Drizzle integration.
- Shipped production-ready app with JWT authentication, role-based access control, mobile UX with swipe gestures, and automated CI/CD pipeline via GitHub to deploy to self-hosted VPS.

Bunganona - Company Profile ~ Frontend Developer — [Bunganona](#)

Stack: React Router v7 (SSR), TypeScript, Tailwind CSS, shadcn/ui, Vite, Cloudflare Workers.

- Architected a pixel-perfect marketing landing page for a florist client — featuring product catalog, category browsing, WhatsApp order CTA, and FAQ accordion with full accessibility support.
- Implemented server-side rendering via React Router v7 on Cloudflare Workers edge runtime — handling routing, asset delivery, and HTML streaming at the CDN layer for global low-latency response.
- Owned the full delivery lifecycle: client requirements → UI/UX design decisions → responsive implementation → production deployment — delivering a cross-device optimized site covering mobile, tablet, and desktop viewports.

Education Level

ARO Leprindo Jakarta- Jakarta, Indonesia

Aug. 2017 - Aug. 2020)

Diploma in Refractionist Optician [GPA: 3.44/4.00]

Harisenin

Fullstack web development

Bearmentor

Fullstack web development

Skills

- **Frontend Development (HTML5, CSS3, JavaScript ES6+, TypeScript, Responsive Design, Component Architecture, (React.js, Next.js, Remix, React Router, SvelteKit)**
- **Backend Development (Hono JS, PostgreSQL, Drizzle, Prisma, JWT)**
- **UI/UX Engineering (Tailwind CSS, Shadcn UI, Material UI, Ant Design, User-Centric Flow Design)**
- **State Management (Zustand, Redux Toolkit, Context API)**
- **API & Data Handling (REST API Integration, Fetch/Axios, OpenAPI/Swagger, Zod Validation)**
- **Performance Optimization (Code Splitting, Lazy Loading, Rendering Optimization, Lighthouse/Core Web Vitals)**
- **Testing (Vitest)**
- **Tooling & Build System (Vite, Webpack, Bun, Node.js, pnpm/npm/yarn)**
- **DevOps & Deployment (Docker, Jenkins CI/CD, PM2, VPS Deployment, Vercel, Netlify, Cloudflare worker)**
- **Version Control & Collaboration (Git, GitHub, Pull Request Workflow, Branching Strategy)**
- **Cloud & File Handling (Uploadcare, Cloudflare R2)**
- **Communication (Cross-team collaboration, async updates, requirement confirmation)**
- **Problem Solving (Debugging patterns, RCA, structured analysis)**
- **Attention to Detail (Test coverage gaps, scenario validation, data accuracy)**
- **Critical Thinking (Risk assessment, prioritisation)**
